Overall Business Flow

Recommended workflow for your project

Since you're using **Laravel + React + Inertia**, implement the system in this order:

1. **Organization** (Company, Branches, Users, Roles, Registers)
2. **System Settings** (Taxes, Units, Payment Methods, Currencies)
3. **Product Management**
4. **Suppliers & Customers**
5. **Inventory**
6. **Purchasing**
7. **Sales / POS**
8. **Returns**
9. **Loyalty & Pricing**
10. **Accounting**

11. Reports & Dashboard

This progression ensures that each module builds on the data and functionality established by the previous ones, resulting in a clean and maintainable development process.
